

Equine Performance Labs

Backed by Evidence. Built on Quality.

We believe a regenerative biologic should be backed by evidence, not just claims. Our mission is simple: real, peer-reviewed research and full transparency in how equicenta CTM is made - grounded in published science, with ongoing studies and rigorous quality controls at every step.

The Evidence

Published Safety Study: Peer-reviewed safety and characterization data published in BMC Medicine (2025)

Proven Consistency: Less than 5% lot to lot variation in high-abundance proteins.¹

Clinical Efficacy Study Completed: Enrollment and data analysis complete, submitted for publication.

The Quality

Single Source Herd: Exclusive Coteau Grove Farms partnership; full traceability, no pooled donor material.

No Additives or Harsh Chemicals: Cryopreserved with no synthetic additives, preservatives, or harsh processing agents.

ISO 13485 Certified Quality System: Produced in an ISO 5 aseptic environment under a certified quality system.

Comprehensive Donor Screening & Third-Party Testing

The *All-In-One* Solution

Innovation, **Backed by Science & Evidence**
ISO 13485 Certified Quality System | Patent Pending

Triple-Action Biologic
Anabolic, Anti-Catabolic,
& Anti-Inflammatory

Regenerative Profile
>2,600 Proteins
Billions of Exosomes
<5% CV Batch-to-Batch
Consistency*

Ready-To-Use Injectable
Thaws in Minutes
No Mixing or Reconstitution

Trusted in the Field
350+ Doses Administered
Across 45+ Practices

Peer-Reviewed Safety

*Batch-to-Batch Consistency on high-abundance proteins
1. Bertone AL, et al. Cryopreserved equine umbilical cord tissue allograft characterization and biocompatibility in vivo in musculoskeletal tissues: a controlled study. BMC Medicine. 2025.
2. Case Study Disclaimer: Individual clinical example shown for illustrative purposes only. Outcomes may differ between animals and should not be interpreted as typical or guaranteed. This case does not expand or modify FDA-approved labeling. Use according to complete product labeling and the professional judgment of the prescribing veterinarian.

Horse First, Sport Second

A landmark study on equicenta® CTM has been published in BMC Medicine

equicenta® CTM
*Regenerative
Musculoskeletal
Tissue Support*

Designed Around Long-Term Soundness

A first-in-class, injectable, **cryopreserved microparticulate equine umbilical cord tissue** allograft, designed for **equine joints, tendons and ligaments.**
Delivered as a **ready-to-use, protein-rich** suspension.

Horse First, Sport Second

Day 0: Grade 4 LF lameness, visible swelling at suspensory branch

Day 30: Reduced swelling, early improvement in symmetry

Clinical Case · equicenta® CTM

Grade 4 Lameness

Cleared in 90 Days

A performance horse presented with Grade 4 LF lameness, a DDF tendon tear, and prior annular ligament resection. Ultrasound confirmed both chronic fibrosis and a new tear. The plan: equicenta® CTM injection at the tear site, corrective shoeing, stall rest, and structured rehabilitation.²

equicenta® CTM

Key Benefits

Triple-Action Biologic

Delivers anabolic, anti-catabolic and anti-inflammatory proteins and cytokines at the injury site, supporting tissue repair and modulating inflammation in a single product.

Multi-Modal Approach, Sustained Release

Consistent fetal matrix proteins plus billions of exosomes, released over time as the scaffold biodegrades, not a one-time burst.

Proven Batch-to-Batch Consistency

Less than 5% variation in high-abundance proteins across lots — a consistency blood-derived products like PRP and IRAP can't offer, since every dose depends on the individual horse's blood.

Proven Biocompatibility

Cryopreserved fetal equine umbilical cord tissue, preserving immune-privileged proteins and structural scaffolding for joint, tendon and ligament repair.

Fully Traceable, Single-Source Manufacturing

No pooled or variable donor material — every vial traces to one controlled, single source herd, processed under ISO 13485 certified quality system.

Ready-To-Use, Single Step Injection

Thaws in minutes from ultra-low storage to a ready to inject suspension. One intra-articular, intralesional or perilesional injection; there is no mixing, reconstitution or blood draw required.

equicenta® CTM

Proteomic Network

A representative selection of the high abundance proteins consistently identified in equicenta® CTM.

Learn More

Discover the Biologic Breakdown: how proteins, cytokines, growth factors, and extracellular matrix components come together within equicenta® CTM.

1. Umbilical Cord Function

Protection: The fetal umbilical cord, in utero, cushions vital blood vessels from compression and torsion, maintaining safe flow between placenta and fetus.

2. Umbilical Cord Function

Development: Fetal umbilical tissue drives the biological processes of new tissue development, supplying the components and signaling environment from which connective tissue is built.

3. Umbilical Cord Function

Regenerative Properties: Fetal umbilical cord is naturally enriched with growth factors, cytokines, hyaluronic acid, and the structural proteins essential for tissue development.
