

CLINICAL EFFICACY · eCTM vs. STANDARD OF CARE · BERTONE ET AL. 2026

Faster. Bigger. More durable.

eCTM outperformed clinician-selected standard of care on every clinical outcome across 138 performance horses.

Headline outcomes Where eCTM most decisively out-performed standard of care.

PAIN-FREE AT 12 WEEKS

3 : 1

eCTM vs. standard of care odds · $p < 0.001$

Odds of reaching a validated pain score of 0 at Week 12 were 3× higher with eCTM than with clinician-selected standard of care.

RETURN TO PERFORMANCE · 26 WEEKS

79%

vs. 21% for standard of care · Cohen's $d = 2.23$ · $p < 0.006$

Share of horses returning to or exceeding their prior performance level 26 weeks after a single eCTM injection.

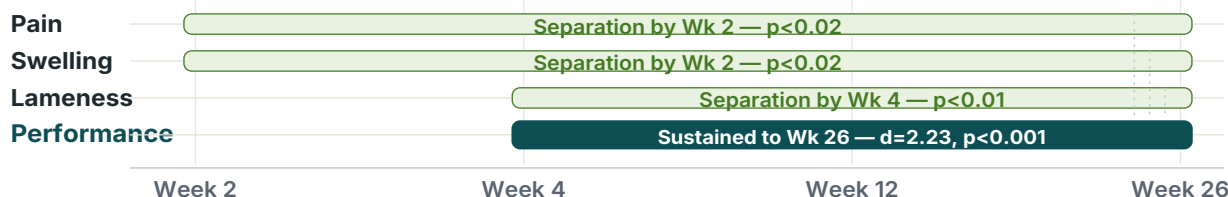

ODDS OF RETURN TO PRIOR PERFORMANCE

2.72×

eCTM vs. standard of care odds ratio · $p < 0.006$

Horses assigned to eCTM had 2.72× the odds of returning to or exceeding prior performance at 26 weeks vs. standard of care.

Earlier separation. Sustained through 12 weeks.

Earlier, sustained gains in pain, swelling, and lameness converged into a durable Performance advantage — significantly better with eCTM through Week 12 ($p < 0.001$) and sustained to Week 26 (Cohen's $d = 2.23$, $p < 0.001$).

Convergent evidence across independent measures

LIGAMENT TISSUE REMODELING

36% : 0%

eCTM ligaments (8 / 22) reached the responding Tissue Remodeling Score by Week 12 vs. 0 / 11 standard-of-care ligaments ($p = 0.013$, Cohen's $d = 0.98$).

KINEMATIC GAIT (SLEIP)

Impact & push-off

Blinded, sensor-based gait analysis showed greater cumulative reduction in forelimb asymmetry with eCTM — push-off $p < 0.003$ at Wk 2, impact $p < 0.05$ at Wk 4.

CLIENT-REPORTED HEALTH

4 / 7 domains

Body condition, hair coat, overall health, and total Quality of Life Index were higher with eCTM at 26 wks (all $p < 0.03$) — blinded owner survey.

RESCUE-ARM CROSS-OVER

Standard of care › eCTM

Horses that failed standard of care and crossed to eCTM reached 26-wk performance scores indistinguishable from primary-eCTM horses; standard of care on standard of care declined.

Earlier recovery. Bigger effect. Sustained to 26 weeks.

A single off-the-shelf injection of eCTM outperformed clinician-selected standard of care across every clinical outcome.
