

FOR HORSE OWNERS · CLIENT-REPORTED OUTCOMES

Healthy horse. Happy client.

What 138 owners saw at home over 26 weeks after their horse's single eCTM injection.

The owner's view of recovery

Alongside every veterinary exam in the 138-horse trial, the owner completed a validated survey rating their horse across seven health and comfort categories on a 0-10 scale. Owners scored their horses at baseline and again at 2, 4, 12, and 26 weeks — giving a parallel, at-home read on recovery that is independent of what the veterinarian saw in the clinic.

By six months, eCTM horses were rated significantly higher than standard-of-care horses on overall health, quality of life, body condition, and hair coat — the outward signs of a horse that feels well and is moving well.

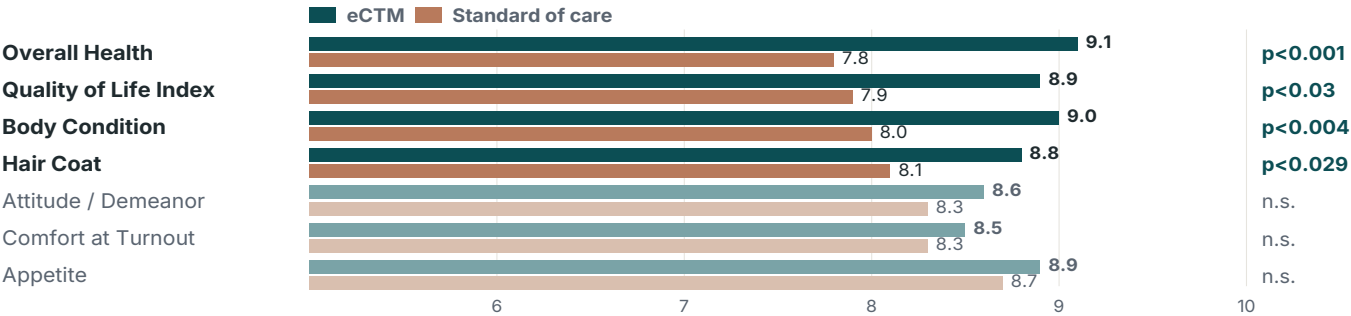

OWNER-REPORTED OUTCOMES · 26 WEEKS

4 of 7

owner-scored categories were rated significantly better for eCTM horses than standard of care at 26 weeks.

- Overall Health (p<0.001)
- Quality of Life Index (p<0.03)
- Body Condition (p<0.004)
- Hair Coat (p<0.029)

FIG 1 · Owner survey — how owners rated their horses at 26 weeks

Client-reported scores (0-10 validated survey) at Week 26. Four categories — Overall Health, Quality of Life Index, Body Condition, and Hair Coat — were significantly higher for eCTM horses than for standard of care. Comfort, appetite, and attitude improved in both groups.

What owners actually noticed

COMFORT & BEHAVIOR

Day-to-day comfort

Attitude, appetite, and comfort in the stall and at turnout improved over six months in both groups.

WILLINGNESS TO WORK

Back to the horse they knew

By 26 weeks, 79% of eCTM horses returned to or exceeded prior performance (vs. 21% on standard of care).

QUALITY OF LIFE

Looks like a healthy horse

Body condition, hair coat, and quality-of-life index were significantly higher for eCTM at 26 weeks.

PEACE OF MIND

A predictable path

A single injection and a clear rehab timeline, with steady progress on the signs owners track at home.

Healthy horse. Happy client.

Owners of eCTM horses rated their horses significantly better on overall health, quality of life, body condition, and hair coat at 26 weeks.
