

HEAD-TO-HEAD SAFETY · eCTM vs. STANDARD OF CARE · BERTONE ET AL. 2026

# Compare the numbers. Then choose.

Injection-site inflammation and adverse-event rates from a controlled clinical trial in 138 horses.

**The head-to-head** Reported per-injection adverse-reaction rate.

## EQUICENTA® CTM

# 3.4%

5 reactions across 148 injections

## 0 / 148

with any injection-site inflammation

Scored 0/4 on a validated 0–4 scale at every follow-up (weeks 2, 4, and 12).

## STANDARD OF CARE

# 10.5%

8 reactions across 76 injections (central review)

## 2 / 76

serious intra-articular reactions in this arm

None occurred with eCTM. Zero infections in the eCTM arm across the trial.

3× lower AE rate · 4.8× lower vet-reported odds ( $p < 0.04$ ) · 5.9× lower by blinded central review ( $p = 0.002$ )

## The advantage holds under every stress test

### PER-INJECTION RATE

# 3.4%

Any reported reaction: 5 of 148 eCTM injections across the trial. Reactions reported by vet, when they occurred, were mild, self-limited, and appeared early after injection.

### UNDER BLINDED REVIEW

# 5.9×

When an independent central adjudicator reclassified events using the most conservative rules, the eCTM advantage grew to 5.9× ( $p = 0.002$ ).

**Lower reaction rate. Zero inflammation. Fewer serious events.**

Head-to-head vs. clinician-selected standard of care in 138 performance horses.
