

The ten hardest questions — answered.

Each answer is anchored to Bertone 2026 and cross-linked to the specific one-pager that goes deeper. Hand off the pager rather than extending the answer.

01 Isn't this just another stem-cell product?

No. eCTM is a microparticulate suspension of umbilical cord protein — a cryopreserved allograft delivering fetal reparative proteins over time, not a cell therapy.

SEE: DIFFERENTIATION (#4) · HEMODERIVATIVES (#7)

02 Isn't this just another PRP / APS?

No. Hemoderivatives are autologous, variable, and require chairside processing per injection. eCTM is off-the-shelf, single-lot, single-injection.

SEE: APS HEAD-TO-HEAD (#8) · HEMODERIVATIVES (#7)

03 Is it FDA-approved?

No. eCTM is under investigation and has not been approved by the U.S. FDA Center for Veterinary Medicine. The standard investigational disclaimer applies on every asset.

SEE: STUDY RIGOR (#9) · OWNER CONVERSATION (#12)

04 How large is the study?

A pragmatic prospective controlled trial in 138 performance horses — IACUC ETCR-2024-0329, AVMA VCT #26005934, published in Front. Vet. Sci. 2026.

SEE: STUDY RIGOR (#9) · EFFICACY (#1)

05 How were the 138 horses selected?

Consecutive performance horses presenting with clinically-diagnosed lameness at participating practices — no cherry-picking. Randomization was blinded and the standard-of-care arm reflects real prescribing.

SEE: STUDY RIGOR (#9) · EFFICACY (#1)

06 Was this blinded?

The Slep kinematic analysis was blinded and sensor-based. Pair the kinematic pager with the efficacy pager for reviewers who lead with rigor.

SEE: KINEMATICS (#6) · STUDY RIGOR (#9)

07 How long does the effect last?

Superiority preserved to 26 weeks in the pragmatic trial. Do not extrapolate beyond that window.

SEE: DURABILITY 26 WK (#14) · EFFICACY (#1)

08 What about safety?

Significantly fewer reported adverse reactions than clinician-selected standard of care. Zero infections and no vet-reported product-related serious adverse events in the eCTM arm.

SEE: SAFETY (#2, V2) · STUDY RIGOR (#9)

09 Can I use it for tendons or off-label indications?

No. Extrapolating to indications or use-cases not represented in the trial breaches the guardrails. Route those conversations back to the treating DVM.

SEE: CASE SELECTION (#17) · LIGAMENT REPORT (#5)

10 Why should I switch when my current biologic 'works'?

eCTM moved the needle earlier, more, and on every scored dimension — with fewer injections, fewer visits, and a 26-week durability window.
